Important Ordering Notes

1. All ride height increases are approximate and will vary due to vehicle specification.
2. Kit includes four ES3000 shock absorbers and mounting hardware.
3. P/N 57098 CV front drive shaft is recommended for extended high speed 4WD use.

2007 FJ Cruiser System Features

Toyota has used their engineering genius to create their most trail worthy vehicle to date. Pro Comp Suspension has completed its mission to elevate it to the next level.

Pro Comp Suspension has 6" suspension systems to transform the FJ Cruiser into an intimidating trail machine. These systems provide the perfect height for fitting 35" tires and clearing larger off road obstacles. Stage II systems feature MX2.75C Coil-over front shocks and MX6 mono-tube adjustable rear shocks to deliver exceptional on road and off road performance. Stage I systems include spacers for the factory front struts and ES9000 twin tube rear shocks. Both systems feature extended steering knuckles and rock sold one-piece lower cross members that install easily and place factory components in the correct location for optimum performance and durability. Replacement rear coils, upper control arms and a track bar relocation bracket keep the rear axle under control, provide lift and maintain proper rear driveline angles.

Installation time 7-8 hours. Cutting of crossmember required to lower front differential. Rack and pinion stays in factory location. Recommended maximum tire and rim size - 35" x 12.50" on 18" or larger diameter 8" or 9" wide rims with up to 4.75" backspacing. Factory or aftermarket 16" or 17" rims cannot be used.

Hot Options!

see pages 100-108

Pro Comp Straight Axle Kits

If a cost effective off-road lift package is what you need for your straight axle Toyota 4WD pickup or FJ40 Landcruiser, look no further than Pro Comp Suspension.

We offer the necessary components to make the capable Toyota straight axle trucks even better. Pro Ride front and rear leaf springs with urethane bushings increase height and ground clearance. Box kits provide sway bar link extensions, bump stop extension, and front U-bolts and an adjustable drag link is offered for steering correction. FJ40 box kits include front and rear U-bolts only.

Important Ordering Notes

1. All ride height increases are approximate and will vary due to vehicle specification.
2. P/N 57098 recommended for extended high speed use in 4x4 HI.

'05 - '07 Tacoma System Features

- Stage II system combines MX 2.75C coil over shocks with extended length steering knuckles and rock proof one-piece lower cross members constructed from laser cut 3/16" thick steel.
- Ride height adjustable for 5" to 6" of lift.
- Allows full range of compression and extension travel without binding ball joints.
- Rack and pinion steering unit remains in factory location for ease of installation.
- Reinforced bump stop extensions and sway bar drop brackets, 2.5" cast iron rear blocks, rear add-a-leaf and top grade hardware complete a rock solid package.
- Stage I system provides all of the great features listed above without the MX 2.75C coil over shocks.
- Coil over spacers allow the use of the factory coil over front struts for reduced cost and stock ride comfort.
- 5 - 6 hour installation time. (cutting the factory cross member is required)

Performance Accessories

Functional bolt-on auxiliary light bar P/N 10000 for 95 - 97 / 01 - 04 Tacoma/Pre Runner. See pages 100-101 more details.

The heart of our premium Tacoma kit is the custom tuned Xtreme 2.75 C coil over shock system.

High performance stainless steel skid plate helps protect the underside of the vehicle. P/N 57196. See skidplate page 63 for more details.

1. All ride height increases are approximate and will vary due to vehicle specification (ex. cab style, engine size, wheel offset, etc).
2. Kit includes four ES3000 shock absorbers and mounting hardware.
3. Compression struts provided are not required for 93-94 models.

K5054B - 4" LIFT STAGE I SYSTEM

K5055B - 4" LIFT STAGE II SYSTEM

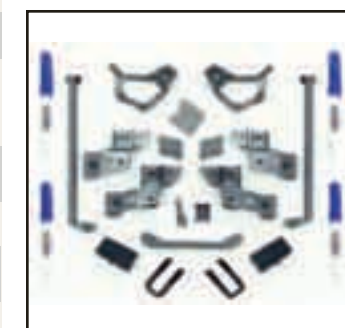

Important Ordering Notes

Stylish and functional bolt-on auxiliary light bar. P/N 17000. See pages 100-101 more details.

High performance stainless steel skidplate helps protect the underside of the vehicle. See skidplate page 63 for more details. Skid plate P/N 57193 for T100 only.

K5051B - 4" LIFT STAGE II SYSTEM

Hot Options!

see pages 100-108

Stage I and II System Features

Our Stage I system includes lower control arm drop brackets, differential drop brackets, sway bar lowering hardware and an additional rear cross member. Ductile iron spindle adapters are used to maintain factory tire rod angles and eliminate bump steer.

Our Stage II systems add supported lower control arm drop brackets to eliminate lateral flex and cross member compression struts add a custom appearance. 90-95 4Runner achieves rear lift with 4" coils, 4-link relocation brackets and track bar relocation bracket
