## DTC <br> P0705 Transmission Range Sensor Circuit Malfunction (PRNDL Input)

## DESCRIPTION

The park/neutral position switch detects the shift lever position and sends signals to the ECM.

| DTC No. | DTC Detection Conditions | Trouble Areas |
| :---: | :---: | :---: |
| P0705 | When any one of following conditions (A) to (C) is met (2-trip detection logic): <br> (A) Any 2 or more of the following signals are ON simultaneously. <br> - NSW input signal is ON. <br> - $\quad R$ input signal is ON. <br> - $\quad D$ input signal is ON. <br> - 3 input signal is ON. <br> - 2 input signal is ON. <br> (B) All switches are OFF simultaneously for $P$ (NSW), <br> R, N (NSW), D, 3 and 2 positions. <br> (C) When NSW or R input signal is ON, 4 or L input signal is ON. | - Open or short in park/neutral position switch circuit <br> - Park/neutral position switch <br> - ECM |

## MONITOR DESCRIPTION

The DTC indicates a problem with the park/neutral position switch and the wire harness in the park/neutral position switch circuit.
For security, the park/neutral position switch detects the shift lever position so that the engine can be started only when the vehicle is in the P or N shift position.
When the park/neutral position switch sends more than one signal at a time from switch positions $\mathrm{P}, \mathrm{R}, \mathrm{N}$, D, 3 or 2, the ECM interprets this as a fault in the switch. The ECM will turn on the MIL and store the DTC.

## INSPECTION PROCEDURE

## HINT:

According to the DATA LIST displayed on the intelligent tester, you can read the values of components, such as the switches, sensors and actuators, without removing any parts. Reading the DATA LIST as a first step of troubleshooting is one method of shortening labor time.
NOTICE:
In the table below, the values listed under "Normal Condition" are for reference only. Do not depend solely on these reference values when judging whether a part is faulty or not.

1. Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
2. Turn the ignition switch to the ON position.
3. Push the "ON" button of the tester.
4. Select the items "DIAGNOSIS / ENHANCED OBD II / DATA LIST / A/T".
5. According to the display on the tester, read the "DATA LIST".

| Item | Measurement Item/ Display (Range) | Normal Condition | Diagnostic Note |
| :---: | :---: | :---: | :---: |
| PNP SW [NSW] | PNP Switch Status/ ON or OFF | Shift lever position is; <br> P or N : ON <br> Except P and N: OFF | When the shift lever position displayed on the intelligent tester differs from the actual position, adjustment of the PNP switch or the shift cable may be incorrect. |
| REVERSE | PNP Switch Status/ ON or OFF | Shift lever position is; R: ON Except R: OFF |  |
| DRIVE | PNP Switch Status/ ON or OFF | Shift lever position is; D or 4: ON Except D and 4: OFF |  |
| 4th/DRIVE | PNP Switch Status/ ON or OFF | Shift lever position is; <br> 4: ON <br> Except 4: OFF |  |
| 3RD | PNP Switch Status/ ON or OFF | Shift lever position is; 3: ON Except 3: OFF |  |
| 2ND | PNP Switch Status/ ON or OFF | Shift lever position is; 2 or L: ON <br> Except 2 and L: OFF |  |
| LOW | PNP Switch Status/ ON or OFF | Shift lever position is; L: ON Except L: OFF |  |

## 1 INSPECT PARKINEUTRAL POSITION SWITCH ASSEMBLY

(a) Disconnect the park/neutral position switch connector.
