**DESCRIPTION**

The 1-2 shift valve performs shifting to 1st gear and other gears.

<table>

N*: Neutral

**MONITOR DESCRIPTION**

This DTC indicates that the 1-2 shift valve in the valve body is locked in the direction of the spring compression. The ECM controls the gearshifts by turning the shift solenoid valves "ON/OFF" and switching oil pressure to the valves in the valve body.

The ECM calculates the "actual" transmission gear by comparing the signals from the input speed sensor (NT) and the output speed sensor (SP2). The ECM can detect many mechanical problems in the shift solenoids, valve body, and the transmission clutches, brakes, and gears. If the ECM detects that the actual gear position and the commanded gear position are different, it will illuminate the MIL and store the DTC.

**MONITOR STRATEGY**

<table>

</tbody>
</table>

**TYPICAL ENABLING CONDITIONS**
The following conditions are common to all Conditions (A), (B), (C) and (D).

| The monitor will run whenever the following DTCs are not present. | P0115 - P0118: ECT sensor  
P0125: Insufficient ECT for Closed Loop  
P0500: VSS  
P0748 - P0799: Trans Solenoid (range) |

</thead>
<tbody>
<tr>
<td>Engine speed - Turbine speed (NE - NT) (After transition from 4th to 5th gear)</td>
<td>150 rpm or less</td>
</tr>
</tbody>
</table>
TYPICAL MALFUNCTION THRESHOLDS
Condition (A) and Conditions (B), (C) or (D) are met:

Condition (A)
- Turbine speed/Output speed
  - 3.30 to 7.50
  - (Actual gear is 1st)

Condition (B)
- Turbine speed/Output speed
  - 1.28 to 1.53
  - (Actual gear is 3rd)

Condition (C)
- Turbine speed - Output speed x 4th gear ratio
  - 1,000 rpm or more

Condition (D)
- Turbine speed - Output speed x 5th gear ratio
  - 1,000 rpm or more

INSPECTION PROCEDURE

1. CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0781)
   - (a) Connect the intelligent tester to the DLC3.
   - (b) Turn the ignition switch to the ON position and push the main switch ON.
   - (c) Select the items "DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES".
   - (d) Read the DTCs using the intelligent tester.

Result:

<table>
<thead>
<tr>
<th>Display (DTC Output)</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only &quot;P0781&quot; is output</td>
<td>A</td>
</tr>
<tr>
<td>&quot;P0781&quot; and other DTCs</td>
<td>B</td>
</tr>
</tbody>
</table>

HINT:
If any codes besides "P0781" are output, perform troubleshooting for those DTCs first.

B GO TO DTC CHART

2. PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SHIFT)

HINT:
Performing the ACTIVE TEST using the intelligent tester allows components, such as the relay, VSV, and actuator, to be operated without removing any parts. Performing the ACTIVE TEST as a first step of troubleshooting is one method of shortening labor time. It is possible to display the DATA LIST during the ACTIVE TEST.
1. Warm up the engine.
2. Turn the ignition switch off.
3. Connect the intelligent tester together with the CAN VIM (Controller Area Network Vehicle Interface Module) to the DLC3.
4. Turn the ignition switch to the ON position.
5. Push the "ON" button of the tester.
6. Clear the DTC.
7. Select the items "DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / SHIFT".
8. According to the display on the tester, perform the "ACTIVE TEST".

HINT:
While driving, the shift position can be changed with the intelligent tester. Comparing the shift position directed by the ACTIVE TEST with the actual shift position enables the problem to be confirmed (See page AT-34).

<table>
<thead>
<tr>

<th>Test Details</th>
<th>Diagnostic Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHIFT</td>
<td>[Test Details] Operate the shift solenoid valve and set each shift position manually. [Vehicle Condition] Vehicle Speed: Less than 30 mph (50 km/h) [Others] • Press →button: Shift up • Press ←button: Shift down</td>
<td>Possible to check the operation of the shift solenoid valves. HINT: Shifting to the 5th gear is possible only when the vehicle is stationary with the engine idling.</td>
</tr>
</tbody>
</table>

HINT:
- This test can be conducted when the vehicle speed is 30 mph (50 km/h) or less.
- The 4th to 5th up-shifting must be performed with the accelerator pedal released.
- The 5th to 4th down-shifting must be performed with the accelerator pedal released.
- Do not operate the accelerator pedal for at least 2 seconds after shifting and do not shift successively.
- The shift position directed by the ECM is shown in the DATA LIST/SHIFT display on the intelligent tester.
- Gear positions in the event of a solenoid valve mechanical problem:

<table>
<thead>
<tr>
<th>Gearshift operated by tester</th>
<th>1st</th>
<th>2nd</th>
<th>3rd</th>
<th>4th</th>
<th>5th</th>
</tr>
</thead>
<tbody>

<td>1st</td>
<td>1st</td>
<td>3rd</td>
<td>3rd</td>
<td>N*</td>
</tr>
</tbody>
</table>

N*: Neutral
OK: Gear position changes in accordance with the tester operation.

NG REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

OK
3. PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SOLENOID (SLT)) (See page AT-84)

   OK

   NG  REPLACE SHIFT SOLENOID VALVE SLT

4. CLEAR DTC AND PERFORM RUNNING TEST

   (a) Clear the DTC, and check for the DTC again after conducting the "MONITOR DRIVE PATTERN FOR ECT TEST" (See page AT-21).

   OK:
   No DTC

   NG  REPAIR OR REPLACE TRANSMISSION VALVE BODY ASSEMBLY

   OK

END
