SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION
   (a) The ECT (Electronic controlled automatic transmission) is an automatic transmission that electronically controls shift timing using the ECM. The ECM detects electrical signals that indicate engine and driving conditions, and controls the shift point, based on driver habits and road conditions. As a result, fuel efficiency and power transmission performance are improved. Shift shock has been reduced by controlling the engine and transmission simultaneously. In addition, the ECT has features such as follows:
   • Diagnostic function.
   • Fail-safe function when a malfunction occurs.
HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
• The ECM of this system is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure that there is no trouble in the CAN communication system.
• *: Use the intelligent tester.
