**DESCRIPTION**

The rear occupant classification sensor RH circuit consists of the occupant classification ECU and the rear occupant classification sensor RH.

DTC B1783 is recorded when a malfunction is detected in the rear occupant classification sensor RH circuit.

**WIRING DIAGRAM**

[Diagram showing the wiring connections for the rear occupant classification sensor RH circuit.]
## INSPECTION PROCEDURE

**HINT:**
- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of the seat cushion.
- In the above case, hold the seat so that it does not tip over. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat up only for as long as necessary.

### 1 CHECK DTC

(a) Turn the ignition switch to the on position.

(b) Clear the DTCs stored in the memory (See page RS-254).

**HINT:**
First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.

(c) Turn the ignition switch to the lock position.

(d) Turn the ignition switch to the on position.

(e) Check the DTCs (See page RS-254).

**OK:**
DTC B1783 is not output.

**HINT:**
Codes other than DTC B1783 may be output at this time, but they are not related to this check.

**OK** → **USE SIMULATION METHOD TO CHECK**

### 2 CHECK CONNECTION OF CONNECTORS

(a) Turn the ignition switch to the lock position.

(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(c) Check that the connectors are properly connected to the occupant classification ECU and the rear occupant classification sensor RH.

**OK:**
The connectors are properly connected.

**NG** → **CONNECT CONNECTORS**
3 CHECK NO.1 SEAT WIRE (TO B+)

(a) Disconnect the connectors from the occupant classification ECU and the rear occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Measure the voltage.

**Standard voltage**

4 CHECK NO.1 SEAT WIRE (FOR OPEN)

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect Q6-1 (SVC4) and Q6-3 (SGD4), and connect Q6-2 (SIG4) and Q6-3 (SGD4) of connector C.

**NOTICE:**
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance.

**Standard resistance**

<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

**NG** REPAIR OR REPLACE NO.1 SEAT WIRE

OK
5 CHECK NO.1 SEAT WIRE (FOR SHORT)

(a) Disconnect the service wire from connector C.
(b) Measure the resistance.

<table>
<thead>
<tr>
<th>Tester connection</th>
<th>Condition</th>
<th>Specified condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q5-6 (SVC4) - Q5-4 (SGD4)</td>

<td>1 MΩ or higher</td>
</tr>
<tr>
<td>Q5-6 (SVC4) - Q5-10 (SIG4)</td>
<td>Always</td>
<td>1 MΩ or higher</td>
</tr>
</tbody>
</table>

NG REPAIR OR REPLACE NO.1 SEAT WIRE

OK

6 CHECK NO.1 SEAT WIRE (TO GROUND)

(a) Measure the resistance.

<table>
<thead>
<tr>
<th>Tester connection</th>
<th>Condition</th>
<th>Specified condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q5-4 (SGD4) - Body ground</td>
<td>Always</td>
<td>1 MΩ or higher</td>

</tr>
<tr>
<td>Q5-10 (SIG4) - Body ground</td>
<td>Always</td>
<td>1 MΩ or higher</td>
</tr>
</tbody>
</table>

NG REPAIR OR REPLACE NO.1 SEAT WIRE

OK
7 CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the rear occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the ignition switch to the on position.
(d) Clear the DTCs stored in the memory (See page RS-254).
   HINT:
   First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(e) Turn the ignition switch to the lock position.
(f) Turn the ignition switch to the on position.
(g) Check the DTCs (See page RS-254).
   OK:
   DTC B1783 is not output.
   HINT:
   Codes other than DTC B1783 may be output at this time, but they are not related to this check.

8 REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-412).
   HINT:
   Perform the inspection using parts from a normal vehicle if possible.

9 PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the ignition switch to the on position.
(d) Using the intelligent tester, perform the zero point calibration (See page RS-246).
   OK:
   COMPLETED is displayed.

NG

Go to step 12
10 | PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the sensitivity check (See page RS-246).
   (1) Confirm that nothing is placed on the passenger seat.
   (2) Confirm that the beginning sensor reading is within the standard range.
      **Standard range:**
      -3.2 to 3.2 kg (-7 to 7 lb)
   (3) Place a 30 kg (66.14 lb) weight (e.g. a lead mass) onto the front passenger seat.
   (4) Confirm that the sensitivity is within the standard range.
      **Standard range:**
      27 to 33 kg (59.52 to 72.75 lb)

HINT:
When performing the sensitivity check, use a solid metal weight (the check result may not be accurate if a liquid weight is used).

NG | Go to step 12

OK

11 | CHECK DTC

(a) Connect the negative (-) terminal cable to the battery.
(b) Turn the ignition switch to the on position.
(c) Clear the DTCs stored in the memory (See page RS-254).
   **HINT:**
   First clear DTCs stored in the occupant classification ECU and then in the center airbag sensor assembly.
(d) Turn the ignition switch to the lock position.
(e) Turn the ignition switch to the on position.
(f) Check the DTCs (See page RS-254).
   **OK:**
   DTC B1783 is not output.
   **HINT:**
   Codes other than DTC B1783 may be output at this time, but they are not related to this check.

OK | END

NG

12 | REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the ignition switch to the lock position.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat assembly RH (See page SE-5).
